SUMMARY

Full-stack software engineer (SDE II) with 3+ years shipping web applications end to end — from independent client projects to production SaaS. Backend- and system-design-focused, building services within distributed, event-driven microservice architectures. At Sportafi, built backend services that held ~99% uptime under 5K–10K concurrent load during live events. Core contributor on TestOwl, a no-code cross-browser test-automation platform, from early development through launch.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Java, PHP

Frameworks & Runtime: NestJS, Node.js, Next.js, React.js, Express.js, Django, Laravel

Databases & Messaging: PostgreSQL, MongoDB, Redis, RabbitMQ, BullMQ, Centrifugo

Cloud & DevOps: AWS (Lambda, S3), Google Cloud Platform (GCP), Docker, Nginx

Practices & Tools: TDD, Test Automation, REST API Design, Microservices, Systems Design, Electron, Grafana

EXPERIENCE

Software Engineer (SDE II)

Apr 2026 – Present

KRS Solutions · Ahmedabad, India

- Build and ship **TestOwl**, a production no-code test-automation platform that lets users record, manage, and run web-application tests across multiple browsers and environments without writing code.
- Develop backend services in NestJS with PostgreSQL and package the cross-platform desktop client with Electron, delivering a code-free authoring experience for automated tests.
- Implement a cloud-based test-case runner on Google Cloud Platform (GCP) that executes automated tests at scale across browsers and environments.
- Configure Nginx for request routing and Grafana for runtime observability of test execution and platform health.
- Work test-first (TDD) to keep the automation engine reliable as new browser and environment support is added.

Software Engineer (SDE I)

Jun 2024 – Mar 2026

eSparkBiz · Ahmedabad, India

- Built and maintained full-stack features for **Sportafi**, a blockchain-powered sports-engagement platform serving 50K+ users at ~99% uptime under 5K–10K concurrent load during live events.
- Developed backend services across a 3–5 service microservices architecture in NestJS / TypeScript, adding a new service built to the team's established pattern and implementing REST APIs, event-driven messaging (RabbitMQ), and background job processing (BullMQ).
- Cut database load by ~20–30% on high-traffic API paths by introducing Redis caching, keeping the platform responsive under peak concurrency during live events.
- Delivered real-time event data and activity streams to the user dashboard by integrating Centrifugo, replacing polling with live updates.
- Built Next.js frontend components and shipped user-engagement, payroll, and payment-integration features, backed by AWS services (Lambda, S3) in a Docker-based environment.

Independent Software Engineer

Jan 2023 – May 2024

Self-Employed · Gujarat, India · Remote

- Delivered end-to-end software development for clients as a student, building responsive sites and applications with Python / Django, JavaScript, React, and the MEAN stack.
- Scoped projects directly with clients and ran multiple engagements concurrently, owning timelines and delivery.

OPEN SOURCE PROJECTS

custom-nestjs-automapper — Authored and published a type-safe object-mapping library for TypeScript and NestJS, built for speed and real-world use.

nestjs-postgres-docker-boilerplate — Production-grade NestJS + PostgreSQL + Docker starter (NestJS v10) for bootstrapping containerized backend services.

EDUCATION

Master of Computer Applications (MCA), Computer Software Engineering

Aug 2023 – May 2025

Dharmsinh Desai University, Nadiad · First Class with Distinction

Bachelor of Computer Applications (BCA), Computer Software Engineering

Jul 2020 – May 2023

Dharmsinh Desai University, Nadiad · First Class with Distinction
